- 1 Four dice are thrown. What is the probability that the product of the number equals 36?
- 
- 2 In the fraction below and its decimal notation (with period of length 4) every letter represents a digit, and different letters denote different digits. The numerator and denominator are coprime. Determine the value of the fraction:  
 $\frac{ADA}{KOK} = 0.SNELSNELSNELSNEL\dots$   
*Note.* Ada Kok is a famous dutch swimmer, and "snel" is Dutch for "fast".
- 
- 3 Consider the configuration of six squares as shown on the picture. Prove that the sum of the area of the three outer squares (*I*, *II* and *III*) equals three times the sum of the areas of the three inner squares (*IV*, *V* and *VI*).
- 
- 4 For every positive integer  $n$ , we define  $n?$  as  $1? = 1$  and  $n? = \frac{n}{(n-1)?}$  for  $n \geq 2$ .  
 Prove that  $\sqrt{1992} < 1992? < \frac{4}{3}\sqrt{1992}$ .
- 
- 5 We consider regular  $n$ -gons with a fixed circumference 4. Let  $r_n$  and  $a_n$  respectively be the distances from the center of such an  $n$ -gon to a vertex and to an edge. (a) Determine  $a_4, r_4, a_8, r_8$ . (b) Give an appropriate interpretation for  $a_2$  and  $r_2$  (c) Prove that  $a_{2n} = \frac{1}{2}(a_n + r_n)$  and  $r_{2n} = \sqrt{a_{2n}r_n}$ . (d) Define  $u_0 = 0, u_1 = 1$  and  $u_n = \frac{1}{2}(u_{n-2} + u_{n-1})$  for  $n$  even or  $u_n = \sqrt{u_{n-2}u_{n-1}}$  for  $n$  odd. Determine  $\lim_{n \rightarrow \infty} u_n$ .
