1 Let *a* and *b* be positive integers and *c* be a positive real number satisfying

$$\frac{a+1}{b+c} = \frac{b}{a}.$$

Prove that $c \ge 1$ holds.

(Karl Czakler)

2 Let ABC be an isosceles triangle with AC = BC and circumcircle k. The point D lies on the shorter arc of k over the chord BC and is different from B and C. Let E denote the intersection of CD and AB. Prove that the line through B and C is a tangent of the circumcircle of the triangle BDE.

(Karl Czakler)

3 The numbers 1, 2, ..., 2020 and 2021 are written on a blackboard. The following operation is executed:

Two numbers are chosen, both are erased and replaced by the absolute value of their difference.

This operation is repeated until there is only one number left on the blackboard.

- (a) Show that 2021 can be the final number on the blackboard.
- (b) Show that $2020\ {\rm cannot}\ {\rm be}\ {\rm the}\ {\rm final}\ {\rm number}\ {\rm on}\ {\rm the}\ {\rm blackboard}.$

(Karl Czakler)

4 Determine all triples (x, y, z) of positive integers satisfying x|(y + 1), y|(z + 1) and z|(x + 1). (Walther Janous)
