Day 1

- 1 Consider a variable point *P* inside a given triangle *ABC*. Let *D*, *E*, *F* be the feet of the perpendiculars from the point *P* to the lines *BC*, *CA*, *AB*, respectively. Find all points *P* which minimize the sum BC = CA = AB
 - $\frac{BC}{PD} + \frac{CA}{PE} + \frac{AB}{PF}.$
- **2** Take r such that $1 \le r \le n$, and consider all subsets of r elements of the set $\{1, 2, ..., n\}$. Each subset has a smallest element. Let F(n, r) be the arithmetic mean of these smallest elements. Prove that:

$$F(n,r) = \frac{n+1}{r+1}.$$

3 Determine the maximum value of $m^2 + n^2$, where m and n are integers in the range 1, 2, ..., 1981 satisfying $(n^2 - mn - m^2)^2 = 1$.

Day 2

- **1 a.)** For which n > 2 is there a set of n consecutive positive integers such that the largest number in the set is a divisor of the least common multiple of the remaining n 1 numbers?
 - **b.)** For which n > 2 is there exactly one set having this property?
- **2** Three circles of equal radius have a common point *O* and lie inside a given triangle. Each circle touches a pair of sides of the triangle. Prove that the incenter and the circumcenter of the triangle are collinear with the point *O*.
- **3** The function f(x, y) satisfies: f(0, y) = y + 1, f(x + 1, 0) = f(x, 1), f(x + 1, y + 1) = f(x, f(x + 1, y)) for all non-negative integers x, y. Find f(4, 1981).
