#### IMO 1994

www.artofproblemsolving.com/community/c3821 by darij grinberg, Valentin Vornicu, grobber, galois

#### Day 1 July 13th

**1** Let *m* and *n* be two positive integers. Let  $a_1, a_2, \ldots, a_m$  be *m* different numbers from the set  $\{1, 2, \ldots, n\}$  such that for any two indices *i* and *j* with  $1 \le i \le j \le m$  and  $a_i + a_j \le n$ , there exists an index *k* such that  $a_i + a_j = a_k$ . Show that

$$\frac{a_1+a_2+\ldots+a_m}{m} \geq \frac{n+1}{2}.$$

- **2** Let ABC be an isosceles triangle with AB = AC. *M* is the midpoint of *BC* and *O* is the point on the line *AM* such that *OB* is perpendicular to *AB*. *Q* is an arbitrary point on *BC* different from *B* and *C*. *E* lies on the line *AB* and *F* lies on the line *AC* such that *E*, *Q*, *F* are distinct and collinear. Prove that *OQ* is perpendicular to *EF* if and only if QE = QF.
- **3** For any positive integer k, let  $f_k$  be the number of elements in the set  $\{k + 1, k + 2, ..., 2k\}$  whose base 2 representation contains exactly three 1s.

(a) Prove that for any positive integer m, there exists at least one positive integer k such that f(k) = m.

(b) Determine all positive integers m for which there exists *exactly one* k with f(k) = m.

Day 2 July 14th

- **4** Find all ordered pairs (m, n) where m and n are positive integers such that  $\frac{n^3+1}{mn-1}$  is an integer.
- 5 Let S be the set of all real numbers strictly greater than 1. Find all functions  $f: S \to S$  satisfying the two conditions:

(a) f(x + f(y) + xf(y)) = y + f(x) + yf(x) for all x, y in S;

- (b)  $\frac{f(x)}{x}$  is strictly increasing on each of the two intervals -1 < x < 0 and 0 < x.
- **6** Show that there exists a set *A* of positive integers with the following property: for any infinite set *S* of primes, there exist *two* positive integers *m* in *A* and *n* not in *A*, each of which is a product of *k* distinct elements of *S* for some  $k \ge 2$ .
