

National Math Olympiad (Second Round) 1995www.artofproblemsolving.com/community/c3879

by Amir Hossein, Kent Merryfield

Day 1

-
- 1 Prove that for every positive integer $n \geq 3$ there exist two sets $A = \{x_1, x_2, \dots, x_n\}$ and $B = \{y_1, y_2, \dots, y_n\}$ for which
- i) $A \cap B = \emptyset$.
 - ii) $x_1 + x_2 + \dots + x_n = y_1 + y_2 + \dots + y_n$.
 - iii) $x_1^2 + x_2^2 + \dots + x_n^2 = y_1^2 + y_2^2 + \dots + y_n^2$.
-
- 2 Let ABC be an acute triangle and let ℓ be a line in the plane of triangle ABC . We've drawn the reflection of the line ℓ over the sides AB, BC and AC and they intersect in the points A', B' and C' . Prove that the incenter of the triangle $A'B'C'$ lies on the circumcircle of the triangle ABC .
-
- 3 Let k be a positive integer. $12k$ persons have participated in a party and everyone shake hands with $3k + 6$ other persons. We know that the number of persons who shake hands with every two persons is a fixed number. Find k .
-

Day 2

-
- 1 Show that every positive integer is a sum of one or more numbers of the form $2^r 3^s$, where r and s are nonnegative integers and no summand divides another.
(For example, $23 = 9 + 8 + 6$.)
-
- 2 Let $n \geq 0$ be an integer. Prove that
- $$\lceil \sqrt{n} + \sqrt{n+1} + \sqrt{n+2} \rceil = \lceil \sqrt{9n+8} \rceil$$
- Where $\lceil x \rceil$ is the smallest integer which is greater or equal to x .
-
- 3 In a quadrilateral $ABCD$ let A', B', C' and D' be the circumcenters of the triangles BCD, CDA, DAB and ABC , respectively. Denote by $S(X, YZ)$ the plane which passes through the point X and is perpendicular to the line YZ . Prove that if A', B', C' and D' don't lie in a plane, then four planes $S(A, C'D'), S(B, A'D'), S(C, A'B')$ and $S(D, B'C')$ pass through a common point.
-
