1 Given a scalene acute triangle $A B C$ with $A C>B C$ let $F$ be the foot of the altitude from $C$. Let $P$ be a point on $A B$, different from $A$ so that $A F=P F$. Let $H, O, M$ be the orthocenter, circumcenter and midpoint of $[A C]$. Let $X$ be the intersection point of $B C$ and $H P$. Let $Y$ be the intersection point of $O M$ and $F X$ and let $O F$ intersect $A C$ at $Z$. Prove that $F, M, Y, Z$ are concyclic.

2 Is there a sequence $a_{1}, a_{2}, \ldots$ of positive reals satisfying simoultaneously the following inequalities for all positive integers $n$ :
a) $a_{1}+a_{2}+\ldots+a_{n} \leq n^{2}$
b) $\frac{1}{a_{1}}+\frac{1}{a_{2}}+\ldots+\frac{1}{a_{n}} \leq 2008$ ?

3 Let $n$ be a positive integer. Consider a rectangle $(90 n+1) \times(90 n+5)$ consisting of unit squares. Let $S$ be the set of the vertices of these squares. Prove that the number of distinct lines passing through at least two points of $S$ is divisible by 4 .

4 Let $c$ be a positive integer. The sequence $a_{1}, a_{2}, \ldots$ is defined as follows $a_{1}=c, a_{n+1}=a_{n}^{2}+$ $a_{n}+c^{3}$ for all positive integers $n$. Find all $c$ so that there are integers $k \geq 1$ and $m \geq 2$ so that $a_{k}^{2}+c^{3}$ is the $m$ th power of some integer.
