– June 30th

- 
- 1** In a triangle  $ABC$ , the excircle  $\omega_a$  opposite  $A$  touches  $AB$  at  $P$  and  $AC$  at  $Q$ , while the excircle  $\omega_b$  opposite  $B$  touches  $BA$  at  $M$  and  $BC$  at  $N$ . Let  $K$  be the projection of  $C$  onto  $MN$  and let  $L$  be the projection of  $C$  onto  $PQ$ . Show that the quadrilateral  $MKLP$  is cyclic.

- 
- 2** Determine all positive integers  $x, y$  and  $z$  such that  $x^5 + 4^y = 2013^z$ .

*(Serbia)*

- 
- 3** Let  $S$  be the set of positive real numbers. Find all functions  $f: S^3 \rightarrow S$  such that, for all positive real numbers  $x, y, z$  and  $k$ , the following three conditions are satisfied:

(a)  $xf(x, y, z) = zf(z, y, x)$ ,

(b)  $f(x, ky, k^2z) = kf(x, y, z)$ ,

(c)  $f(1, k, k+1) = k+1$ .

*(United Kingdom)*

- 
- 4** In a mathematical competition, some competitors are friends; friendship is mutual, that is, when  $A$  is a friend of  $B$ , then  $B$  is also a friend of  $A$ .

We say that  $n \geq 3$  different competitors  $A_1, A_2, \dots, A_n$  form a *weakly-friendly cycle* if  $A_i$  is not a friend of  $A_{i+1}$  for  $1 \leq i \leq n$  (where  $A_{n+1} = A_1$ ), and there are no other pairs of non-friends among the components of the cycle.

The following property is satisfied:

"for every competitor  $C$  and every weakly-friendly cycle  $S$  of competitors not including  $C$ , the set of competitors  $D$  in  $S$  which are not friends of  $C$  has at most one element"

Prove that all competitors of this mathematical competition can be arranged into three rooms, such that every two competitors in the same room are friends.
