Czech-Polish-Slovak Match 2005

www.artofproblemsolving.com/community/c4191 by djb86

Day 1 June 21st

1 Let *n* be a given positive integer. Solve the system

$$x_1 + x_2^2 + x_3^3 + \dots + x_n^n = n,$$

$$x_1 + 2x_2 + 3x_3 + \dots + nx_n = \frac{n(n+1)}{2}$$

in the set of nonnegative real numbers.

- **2** A convex quadrilateral *ABCD* is inscribed in a circle with center *O* and circumscribed to a circle with center *I*. Its diagonals meet at *P*. Prove that points *O*, *I* and *P* lie on a line.
- **3** Find all integers $n \ge 3$ for which the polynomial

$$W(x) = x^{n} - 3x^{n-1} + 2x^{n-2} + 6$$

can be written as a product of two non-constant polynomials with integer coefficients.

Day 2June 22nd4We distribute $n \ge 1$ labelled balls among nine persons A, B, C, \dots, I . How many ways are
there to do this so that A gets the same number of balls as B, C, D and E together?5Given a convex quadrilateral ABCD, find the locus of the points P inside the quadrilateral
such that $S_{PAB} \cdot S_{PCD} = S_{PBC} \cdot S_{PDA}$
(where S_X denotes the area of triangle X).6Determine all pairs of integers (x, y) satisfying the equation

$$y(x+y) = x^3 - 7x^2 + 11x - 3.$$
