## Day 1

1 Determine whether or not there exist numbers $x_{1}, x_{2}, \ldots, x_{2009}$ from the set $\{-1,1\}$, such that:

$$
x_{1} x_{2}+x_{2} x_{3}+x_{3} x_{4}+\ldots+x_{2008} x_{2009}+x_{2009} x_{1}=999
$$

2 Point $P$ lies inside a triangle $A B C$. Let $D, E$ and $F$ be reflections of the point $P$ in the lines $B C, C A$ and $A B$, respectively. Prove that if the triangle $D E F$ is equilateral, then the lines $A D, B E$ and $C F$ intersect in a common point.

3 Let $x$ be a real number with the following property: for each positive integer $q$, there exists an integer $p$, such that

$$
\left|x-\frac{p}{q}\right|<\frac{1}{3 q} .
$$

Prove that $x$ is an integer.

## Day 2

1 Consider $n$ children in a playground, where $n \geq 2$. Every child has a coloured hat, and every pair of children is joined by a coloured ribbon. For every child, the colour of each ribbon held is different, and also different from the colour of that childs hat. What is the minimum number of colours that needs to be used?

2 Find all functions $f: \mathbb{N}_{0} \rightarrow \mathbb{N}_{0}$ for which $f(0)=0$ and

$$
f\left(x^{2}-y^{2}\right)=f(x) f(y)
$$

for all $x, y \in \mathbb{N}_{0}$ with $x>y$.
3 Points $C, E, D$ and $F$ lie on a circle with centre $O$. Two chords $C D$ and $E F$ intersect at a point $N$. The tangents at $C$ and $D$ intersect at $A$, and the tangents at $E$ and $F$ intersect at $B$. Prove that $O N \perp A B$.
