by Pascual2005, April, daniel73

**Day 1**

- 
- 1 It is given a  $1001 \times 1001$  board divided in  $1 \times 1$  squares. We want to mark  $m$  squares in such a way that:
- 1: if 2 squares are adjacent then one of them is marked.
  - 2: if 6 squares lie consecutively in a row or column then two adjacent squares from them are marked.

Find the minimum number of squares we must mark.

- 
- 2 In the plane are given a circle with center  $O$  and radius  $r$  and a point  $A$  outside the circle. For any point  $M$  on the circle, let  $N$  be the diametrically opposite point. Find the locus of the circumcenter of triangle  $AMN$  when  $M$  describes the circle.

- 
- 3 Let  $n$  and  $k$  be positive integers such as either  $n$  is odd or both  $n$  and  $k$  are even. Prove that exists integers  $a$  and  $b$  such as  $GCD(a, n) = GCD(b, n) = 1$  and  $k = a + b$

**Day 2**

- 
- 1 Determine all pairs  $(a, b)$  of positive integers, each integer having two decimal digits, such that  $100a + b$  and  $201a + b$  are both perfect squares.

- 
- 2 Given a scalene triangle  $ABC$ . Let  $A', B', C'$  be the points where the internal bisectors of the angles  $CAB, ABC, BCA$  meet the sides  $BC, CA, AB$ , respectively. Let the line  $BC$  meet the perpendicular bisector of  $AA'$  at  $A''$ . Let the line  $CA$  meet the perpendicular bisector of  $BB'$  at  $B''$ . Let the line  $AB$  meet the perpendicular bisector of  $CC'$  at  $C''$ . Prove that  $A'', B''$  and  $C''$  are collinear.

- 
- 3 Given a set  $\mathcal{H}$  of points in the plane,  $P$  is called an "intersection point of  $\mathcal{H}$ " if distinct points  $A, B, C, D$  exist in  $\mathcal{H}$  such that lines  $AB$  and  $CD$  are distinct and intersect in  $P$ . Given a finite set  $\mathcal{A}_0$  of points in the plane, a sequence of sets is defined as follows: for any  $j \geq 0$ ,  $\mathcal{A}_{j+1}$  is the union of  $\mathcal{A}_j$  and the intersection points of  $\mathcal{A}_j$ . Prove that, if the union of all the sets in the sequence is finite, then  $\mathcal{A}_i = \mathcal{A}_1$  for any  $i \geq 1$ .
-
