by Goutham, tchebychev

Day 1

-
- 1 Prove that a triangle ABC is right-angled if and only if

$$\sin A + \sin B + \sin C = \cos A + \cos B + \cos C + 1$$

-
- 2 Consider the polynomials

$$f(p) = p^{12} - p^{11} + 3p^{10} + 11p^3 - p^2 + 23p + 30;$$

$$g(p) = p^3 + 2p + m.$$

Find all integral values of m for which f is divisible by g .

-
- 3 A plane ρ and two points M, N outside it are given. Determine the point A on ρ for which $\frac{AM}{AN}$ is minimal.

Day 2

-
- 1 Solve the system of equations

$$x^2 + y^2 + z^2 + t^2 = 50;$$

$$x^2 - y^2 + z^2 - t^2 = -24;$$

$$xy = zt;$$

$$x - y + z - t = 0.$$

-
- 2 Let p, q be real numbers with $0 < p < q$ and let t_1, t_2, \dots, t_n be real numbers in the interval $[p, q]$. Denote by A and B the arithmetic means of t_1, t_2, \dots, t_n and of $t_1^2, t_2^2, \dots, t_n^2$, respectively. Prove that

$$\frac{A^2}{B} \geq \frac{4pq}{(p+q)^2}.$$

-
- 3 Two circles k_1 and k_2 with centers O_1 and O_2 respectively touch externally at A . Let M be a point inside k_2 and outside the line O_1O_2 . Find a line d through M which intersects k_1 and k_2 again at B and C respectively so that the circumcircle of $\triangle ABC$ is tangent to O_1O_2 .
-
