- 1 In a convex quadrilateral it is known  $ABCD$  that  $\angle ADB + \angle ACB = \angle CAB + \angle DBA = 30^\circ$  and  $AD = BC$ . Prove that from the lengths  $DB$ ,  $CA$  and  $DC$ , you can make a right triangle.

---

- 2 Let  $N = 2010! + 1$ . Prove that
  - a)  $N$  is not divisible by 4021;
  - b)  $N$  is not divisible by 2027, 2029, 2039;
  - c)  $N$  has a prime divisor greater than 2050.

---

- 3 For positive real numbers  $a, b, c, d$ , satisfying the following conditions:  $a(c^2 - 1) = b(b^2 + c^2)$  and  $d \leq 1$ , prove that:  $d(a\sqrt{1 - d^2} + b^2\sqrt{1 + d^2}) \leq \frac{(a+b)c}{2}$

---

- 4 In country there are two capitals ( $A$  and  $B$ ) and finite number of towns. Some towns (or town with one of capital) connected with roads (one-way). (between every two towns or capital and town there are arbitrary number of roads) such that exist at least one way from  $A$  to  $B$ .  
Given, that any two ways from  $A$  to  $B$  have at least one common road.  
Prove, that exist one road, such that all ways from  $A$  to  $B$  pass through this road.
